ALZAI-RAF

For Medicare Advantage Plans

AI-Powered Risk Stratification to Optimize patient care & Risk Adjustment Factor (RAF) management

THE PROBLEM

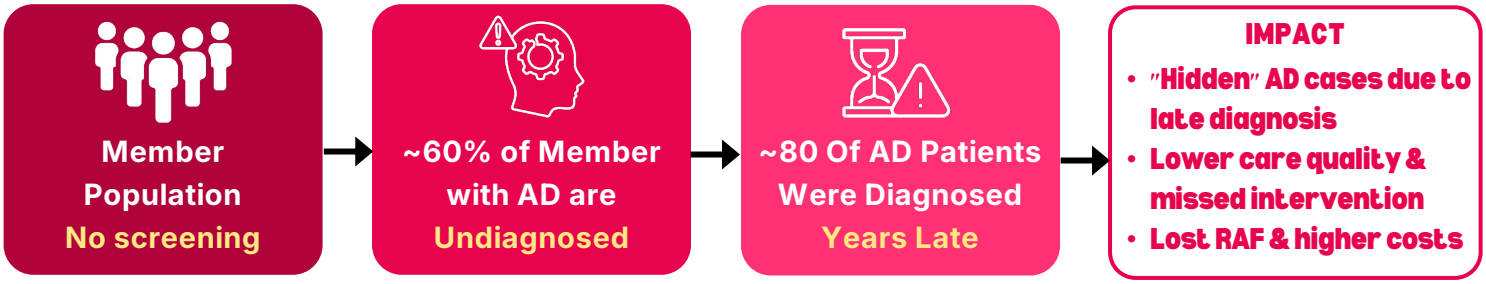
Healthcare Plans miss RAF and care quality suffers for Medicare Advantage members, driven by undiagnosed Alzheimer's disease and stricter V28 requirements.

- ~60% of Alzheimer's cases remain **undiagnosed**
- Early-stage diagnosis is limited to **~20% of cases today**
- Diagnosis often occurs after **high-cost events (hospitalization)**
- No systematic, **data-driven population screening exists**
- RAF depends only on **documented and coded diagnoses**

Massive Health Plan Burden:

- **~$4,000 PMPY excess cost**
- **High acute care utilization**
- **Lost RAF income**
- **V28 penalizes non-specific coding**

CURRENT STATE OF CARE, WITH NO RISK SCREENING



No Screening = Undiagnosed Members = lower care quality and missed RAF

THE ALZAI SOLUTION

ALZAI introduces an AI-powered Health Plan data analysis delivering AD risk stratification

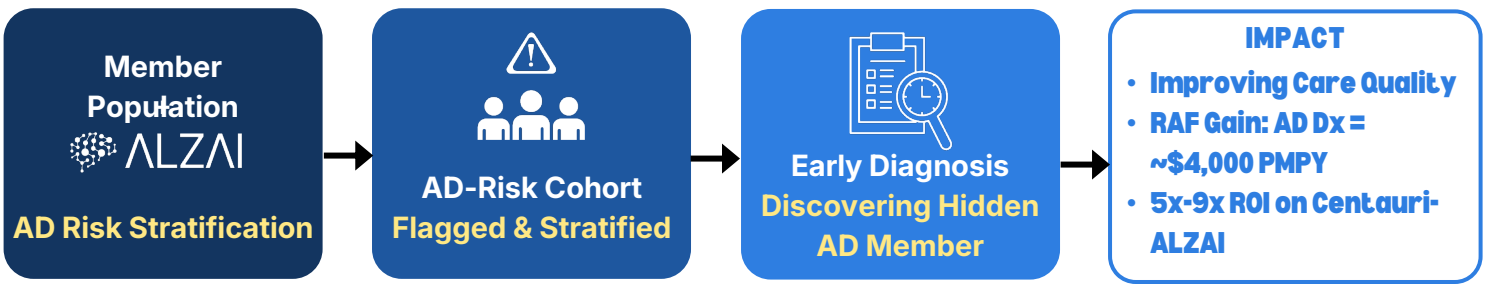
ALZAI:

- Identifies likely **undiagnosed "Hidden" AD patients**
- Filters populations into **high-probability cohorts**
- Enables **efficient use of AD diagnosis**
- Improves accuracy of **HCC coding and RAF alignment**

Key advantages:

- 100% Non-invasive, HP Data analysis only
- Seamless integration and scalable
- Audit-ready workflows
- Immediate RAF & cost improvement

ENHANCED CARE WITH ALZAI SCREENING



ALZAI = Undiagnosed become Diagnosed = higher care quality, increased RAF

CLINICAL VALIDATION

Retrospective Multinational Study

- **1.6M+** patient records analyzed of them **1.1M US patients**
- Data sources: **over 100M** datasets from Clalit Health Services (Israel) and HealthVerity (USA)
- Population: **Diverse populations from across the USA** and Israel
- Outcome: Validation of ALZAI's ability to identify high-risk individuals preceding disease diagnosis

ALZAI demonstrated robust screening, flagging likely hidden early-stage AD patients.
ALZAI enables earlier diagnosis, RAF gains, cost reduction through better care.

ABOUT US

ALZAI Health Corp. is a predictive AI healthcare company focused on enabling early detection of under-diagnosed chronic diseases through non-invasive, data-driven risk stratification.
Our platform identifies individuals at elevated risk **before symptoms appear**, enabling proactive intervention at scale.

Key capabilities:

- Leverages existing healthcare data (EHR + labs)
- Identifies patients years before diagnosis
- Enables proactive clinical intervention at scale
